Hair Growth Supplement Brand

# There's more to thinning hair than genetics alone.

Thinning hair has multiple root causes—and they affect each of us differently throughout our life stages.

## Hormones

An imbalance in the androgen hormone, DHT, can cause hair follicles to shrink—and eventually close.

## Stress

Stress can cause hair follicles to shift from a growth state to a rest state while also disrupting hormones and nutrient absorption.

## Lifestyle

Your surroundings can influence hair follicles by introducing toxins into your body and depleting antioxidant stores.

## Metabolism

Aging, inflammation, and hormone imbalances can lead to poor metabolism—which negatively impacts hair cells and energy levels needed for hair growth.

## Nutrition

Without proper nutrient absorption, hair follicles don't get the nourishment they need.

## Aging

As you age, hair strands become shorter, weaker, and contain less pigment due to the degradation of collagen and elastin in the scalp.

# Natural ingredients patented for hair growth.

Featuring Synergen Complex®, a patented blend of phytoactive ingredients clinically shown to improve hair growth by multi-targeting root causes of hair thinning.\*\*

## Saw Palmetto

Lowers follicle-shrinking DHT hormone to promote hair growth.<sup>1</sup>

## Ashwagandha

An adaptogen that helps balance stress hormones and build stress resilience to support the hair growth cycle.<sup>2</sup>

## Tocotrienol Complex

A concentrated form of Vitamin E that improves hair density by reducing environmental stress.<sup>3</sup>

## Curcumin

A superior antioxidant that is able to address multiple root causes of hair thinning.<sup>4</sup>

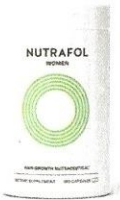

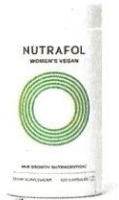

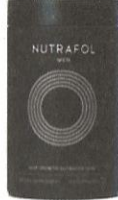

## Marine Collagen Peptides

Provides the building blocks for strong hair fibers while delivering hydration to the scalp.<sup>5</sup>

\*\*Ingredients vary by formula to best support your bio-specific needs.

Clinically effective, bio-specific Hair Growth Nutraceuticals to address multiple root causes of thinning hair for men and women throughout life stages and lifestyles.
